Edyxo® - 50

Edyxo®, prepainted galvanized steel of a thermosetting polyester multilayer paint of 50µm thickness polymerized at high temperature. This coating has aspects of patterns such as wood, patina or flourishing of galvanized steels of yesteryear. Edyxo® can be used in very sunny and maritime atmospheres such as the Caribbean, excluding the waterfront.

- This coating has all the characteristics of a contemporary and creative architecture
- In addition to these original aesthetic effects, Edyxo® has been developed to ensure the durability of your façade
- Excellent resistance to ultraviolet radiation even for use in the West Indies
- Excellent resistance against corrosion thanks to a high-durability paint system reinforced with a protective varnish
