Hairultra® - 35

Hairultra®, prepainted galvanized steel of a 35µm thick thermosetting polyester two-coat paint polymerized at high temperature with a thickness of 35µm. Modern range of over 40 colors for roofing and cladding, including a wide variety of metallic colors. Hairultra® 35 can be used in very sunny and maritime atmospheres such as the Caribbean, excluding the waterfront.

- For more than 15 years, Hairultra® has proved its performance in the West Indies where climatic conditions and ultra-violet radiation are very strong. Hairultra® can be used in slightly corrosive atmospheres, greater than 1km from the sea, and in indoor atmospheres with high humidity and a non-agressive atmosphere
- For more severe environments, Hairexcel® or Sinéa® coatings are recommended, see our material guide
