Kristal®

Kristal® is a hot dip galvanised steel with a cmposition of zinc and aluminium alloy offering an exceptionnal durability.

- Material "design" and aesthetic, Kristal® fulfills perfectly the requirements of the architects: the solidity of steel, the protection of zinc and inalterability of aluminium
- Thanks to a specific process developed by ArcelorMittal, Kristal® has an aesthetic and natural spangle whom size is controlled for a better overview. By offering this service, ArcelorMittal Construction allows the architects to ensure the visual uniformity of their facade or sunscreen projects
- Kristal® can be also used for roofing and offers an excellent thermal and luminous reflectivity
