ZMevolution®

ZMevolution® is the new galvanized steel from ArcelorMittal Construction. It has been specially designed for the construction field. It is used throughout the product range of metallic and coated coatings.

- ZMevolution® is manufactured using a galvanizing process in a molten bath whose specific chemical composition contains zinc, aluminum and magnesium
- The zinc gives cathodic protection, the aluminum passive protection and magnesium stabilizes the whole and protects the edges
- ZMevolution® has a corrosion resistance three times higher than standard galvanized steel
